MLTC Bioenergy Centre

NorthStar Carbon Sequestration

Proven technology components applied to a novel concept

1 BIOMASS ABSORBS CARBON

Trees or other biomass absorb CO2 from the atmosphere as they grow via photosynthesis

2 WASTE COMBUSTED FOR ENERGY

Carbon (wood) waste is burned to create useful electricity and heat

Current Operations

CCS Addition

3 CARBON CAPTURED

Instead of releasing the carbon back into the cycle, it is collected, purified, and compressed into a liquid

4 PERMANENT STORAGE

CO2 is transported to a well and injected deep underground. The reservoir is actively monitored to ensure the CO2 is safely contained.
